

Arctic Glaciers

1. Why is the Arctic an important place for scientists and others interested in climate change to study?
2. What did the Glacier Group measure? What did it tell them about the Arctic glaciers?
3. How was art important to the students' experience? Choose one individual art project as an example, and explain what the student hopes it will do.
4. Using evidence from the videos and the students' writing, how would you say the voyage affected participants? Choose two students and describe a moment from the trip that was really meaningful to each of them.
